## PET/MRI: Installment

Giulia Ginami

Magnetic Resonance, Siemens Healthineers, Germany

Cancer rates are increasing globally. PET-MRI is an imaging tool that may help in revealing additional findings, and thus leading to a change in therapy, when examining cancer patients. In order to deliver high-quality PET-MRI examinations, the utilization of cutting-edge applications and technology is of the essence. Biograph mMR, the PET-MRI system from Siemens Healthineers, has allowed users around the world to set the pace in diagnostic imaging, by combining state-of-the-art 3T MRI with proven molecular imaging, fully integrated in one system. Synergistic PET-MRI applications are among the points of strength of Biograph mMR. Such applications significantly improve diagnostic accuracy, capabilities as well as the standardization of quality of care – for both research and clinical use.
